

## Quantum Mechanics

### Problem 1:

The wave function  $\psi(x) = A \exp \left\{ -\frac{b^2 x^2}{2} \right\}$ , where  $A$  and  $b$  are real constants, is a normalized eigenfunction of the Schrödinger equation for a particle of mass  $M$  and energy  $E$  in a one dimensional potential  $V(x)$  such that  $V(x) = 0$  at  $x = 0$ . Which of the following is correct?

- (A)  $V = \frac{\hbar^2 b^4}{2M}$
- (B)  $V = \frac{\hbar^2 b^4 x^2}{2M}$
- (C)  $V = \frac{\hbar^2 b^6 x^4}{2M}$
- (D)  $E = \hbar^2 b^2 (1 - b^2 x^2)$
- (E)  $E = \frac{\hbar^2 b^4}{2M}$

### Problem 2:

In perturbation theory, what is the first order correction to the energy of a hydrogen atom (Bohr radius  $a_0$ ) in its ground state due to the presence of a static electric field  $E$ ?

- (A) Zero
- (B)  $eEa_0$
- (C)  $3eEa_0$
- (D)  $\frac{8e^2 E a_0^3}{3}$
- (E)  $\frac{8e^2 E^2 a_0^3}{3}$

### Problem 6:

If the hyperfine structure is ignored, an atomic state  ${}^2P_{3/2}$  in a weak external field will be split into a number of states equal to

- (A) 2 (B) 3 (C) 4 (D) 5 (E) 6

### Problem 3:

A system is known to be in the normalized state described by the wave function

$$\psi(\theta, \varphi) = \frac{1}{\sqrt{30}} (5 Y_4^3 + Y_6^3 - 2 Y_6^0),$$

where the  $Y_l^m(\theta, \varphi)$  are the spherical harmonics.

The probability of finding the system in a state with azimuthal orbital quantum number  $m = 3$  is

- (A) 0, (B) 1/15, (C) 1/6,
- (D) 1/3, (E) 13/15

### Problem 4:

The wave function for identical fermions is anti-symmetric under particle interchange. Which of the following is a consequence of this property?

- (A) Pauli exclusion principle
- (B) Bohr correspondence principle
- (C) Heisenberg uncertainty principle
- (D) Bose-Einstein condensation
- (E) Fermi's golden rule

### Problem 5:

The hypothesis that an electron possesses spin is qualitatively significant for the explanation of all of the following topics EXCEPT the

- (A) structure of the periodic table
- (B) specific heat of metals
- (C) anomalous Zeeman effect
- (D) deflection of a moving electron by a uniform magnetic field
- (E) fine structure of atomic spectra

**Problem 7:**

The diagram above shows the levels and transitions of a ruby laser. All of the following statements about the laser are correct EXCEPT:

- (A) The laser works because of population inversion.
- (B)  $E_2$  is the energy of a metastable state.
- (C) Transition a involves absorption of radiation.
- (D) Transition b involves stimulated emission.
- (E) The laser must be optically pumped by radiation of frequency  $f = \frac{E_3 - E_1}{h}$ .

**Problem 8:**

Consider a potential of the form

$$\begin{aligned}
 V(x) &= 0, & x \leq a \\
 V(x) &= V_0, & a < x < b \\
 V(x) &= 0, & x \geq b
 \end{aligned}$$

as shown in the figure above. Which of the following wave functions is possible for a particle incident from the left with energy  $E < V_0$  ?

### Problem 9:

Eigenfunctions for a rigid dumbbell rotating about its center have a  $\phi$  dependence of the form  $\psi(\phi) = Ae^{im\phi}$ , where  $m$  is a quantum number and  $A$  is a constant. Which of the following values of  $A$  will properly normalize the eigenfunction?

- (A)  $\sqrt{2\pi}$
- (B)  $2\pi$
- (C)  $(2\pi)^2$
- (D)  $\frac{1}{\sqrt{2\pi}}$
- (E)  $\frac{1}{2\pi}$

### Problem 10:

In this apparatus, the photocathode and the collector are made from the same material. The potential  $V$  of the collector, measured relative to ground, is initially zero and is then increased or decreased monotonically. The effect is described by Einstein's photoelectric equation

$$|eV| = h\nu - W.$$

When the photoelectric equation is satisfied and applicable to this situation,  $V$  is the

- (A) negative value at which the current stops
- (B) negative value at which the current starts
- (C) positive value at which the current stops
- (D) positive value at which the current starts
- (E) voltage induced when the light is on

### Problem 11:

The photoelectric equation is derived under the assumption that

- (A) electrons are restricted to orbits of angular momentum  $n\hbar$ , where  $n$  is an integer
- (B) electrons are associated with waves of wavelength  $\lambda = h/p$ , where  $p$  is momentum
- (C) light is emitted only when electrons jump between orbits
- (D) light is absorbed in quanta of energy  $E = h\nu$
- (E) light behaves like a wave

### Problem 12:

The quantity  $W$  in the photoelectric equation is the

- (A) energy difference between the two lowest electron orbits in the atoms of the photocathode
- (B) total light energy absorbed by the photocathode during the measurement
- (C) minimum energy a photon must have in order to be absorbed by the photocathode
- (D) minimum energy required to free an electron from its binding to the cathode material
- (E) average energy of all electrons in the photocathode

### Problem 13:

Photons of wavelength  $\lambda$  scatter elastically on free protons initially at rest. The wavelength of the photons scattered at  $90^\circ$  is increased by

- (A)  $\lambda/137$
- (B)  $\lambda/1836$
- (C)  $h/m_e c$ , where  $h$  is Planck's constant,  $m_e$  the rest mass of an electron, and  $c$  the speed of light
- (D)  $h/m_p c$ , where  $h$  is Planck's constant,  $m_p$  the rest mass of a proton, and  $c$  the speed of light
- (E) zero

**Problem 14:**

A system containing two identical particles is described by a wave function of the form

$$\psi = \frac{1}{\sqrt{2}} [\psi_{\alpha}(x_1) \psi_{\beta}(x_2) + \psi_{\beta}(x_1) \psi_{\alpha}(x_2)]$$

where  $x_1$  and  $x_2$  represent the spatial coordinates of the particles and  $\alpha$  and  $\beta$  represent all the quantum numbers, including spin, of the states that they occupy. The particles might be

- (A) electrons
- (B) positrons
- (C) protons
- (D) neutrons
- (E) deuterons

**Problem 15:**

Which of the following is NOT compatible with the selection rule that controls electric dipole emission of photons by excited states of atoms?

- (A)  $\Delta n$  may have any negative integral value.
- (B)  $\Delta \ell = \pm 1$
- (C)  $\Delta m_{\ell} = 0, \pm 1$
- (D)  $\Delta s = \pm 1$
- (E)  $\Delta j = \pm 1$
